

International Workshop on Financial Technology and Security 2018

Call for papers

Financial technology (FinTech) is the new technology that aims to compete with traditional financial methods with a great impact on whole of society. With the development of telecommunications and internet technologies, financial services have an opportunity to get closer to consumers than ever before. Many financial institutions understood the opportunity and launched mobile-oriented programs from notifications services to full-fledged banking services. User experience, development, implementation and security are emerging as new concerns and are being followed by new services addressing them.

The event will bring together an opportunity to share ideas of academic and industry professionals about recent progress in the financial technology space, including systems and models, applications and services, novel technologies, and security issues.

Organized by **ITRC Fintech Security Research Center, Chungman University.**

Contacts: Program Chair, Prof. Yoojae Won (yjwon@cnu.ac.kr)

The workshop stands for the continuously evolving and converging technologies on FinTech, including:

- Algorithms, Models, Applications, and Services
- Blockchain network
- Security and Privacy issues
- Wearables, Body Sensor Networks, Smart Portable Devices
- Converged ICT Applications and Services
